TOXICOLOGICAL AND SAFETY HANDLING INFORMATION
(For Use by Medical and Safety Personnel)

1. **PRODUCT:** Alodine Nos. C-5, 600, 1000, 1000L, 1200R Liquid, 1200U Liquid, and 1500
2. **MANUFACTURER:** Amchem Products, Inc., Ambler, Pennsylvania
3. **STORAGE REQUIREMENTS:** Store in a cool, dry area. Do not store near oxidizable or flammable materials.
4. **PROTECTIVE EQUIPMENT:** The use of rubber gloves, aprons, face shields, goggles, etc., is recommended when handling Alodine.
5. **CARE OF BREAKAGE OR LEAKAGE:** Transfer the contents to a clean, polyethylene-lined drum. Discard the broken container after rinsing thoroughly with water. Organic materials such as sawdust, wood, paper, or cloth which have been saturated with Alodine can be readily ignited when dry. Such materials should be thoroughly rinsed, and, if discarded, put in a fireproof container.
6. **FIRST AID:**
 - a. Skin Contact: Treat as for corrosive chemicals. Wash thoroughly with soap and water immediately after contact. Prolonged contact with Alodine, especially in hot, humid weather, can cause dermatitis or chemical burns.
 - b. Eye Contact: Flush with large amounts of water immediately after contact. Call a doctor.
 - c. Inhalation: Prolonged inhalation may cause injury to the mucous membranes and respiratory tract. Adequate exhaust systems, masks, respirators, etc., should be provided.
 - d. Ingestion: Treat as for corrosive chemicals.

7. **PROPERTIES:**

- a. State: Alodine Nos. C-5, 600, and 1000 are powders. The remainder are liquids; their specific gravities are tabulated below:

Alodine No.	Specific Gravity(60°F.)	Alodine No.	Specific Gravity(60°F.)
		1200R Liquid	1.067
		1200U Liquid	1.258
1000L	1.01	1500	1.052

- b. Description: These Alodines are acidic corrosive materials containing chromates and fluorides.

- c. Flammability: Alodines are nonflammable chemicals which are slightly prone to spontaneous heating in moist atmospheres.

The chromates present in Alodines are very strong oxidizing agents and will intensify any fire of which they are a part. Should organic materials such as rags and wood become saturated with the chromates, they may, under certain conditions, undergo spontaneous combustion.

8. EXTINGUISHING AGENTS: The use of water is recommended for Class A or Class B fires containing oxidizing agents.
